Experience

Freelance at UpWork for 1 year

Projects

TodoList – *To do list(like trello)*[{view}](#)

Todolist – it's react app templates typescript. Rest API rule is used. I also used Redux for business logic layer, later I rewrote the project on Redux Toolkit. There is a login in the application where you can manage your personal lists, which can be all sorts of modifications. As a UI I used Material UI.

Social Network – *simple social network*[{view}](#)

This project is also based on react + typescript. You can also log into your account, you can follow or view other people's pages. You can edit your profile there. I also added a theme change. For the UI, I tried to create my own components, so I used less UI stuff than in TODOLIST.

Skills

- React
- Redux Toolkit
- React Native
- Redux
- Material UI
- REST API
- Postman
- TypeScript
- Unit Tests
- Apollo

Languages

- Russian, native
- Kazakh, native
- English, intermediate ([cert](#))
